

Chapter 1

Assignment 1

Deadline: December 28, 2025

Short Answer Questions:

1. Define a web application. How is it different from a desktop application?
2. What is client–server architecture? Draw and explain its basic structure.
3. What is the role of HTTP in web communication?
4. What is a URL? Explain its components with an example.
5. Define tags and attributes with examples.
6. What is the difference between block-level and inline elements?
7. What are semantic HTML5 elements? Give examples.
8. List different types of HTML form inputs.
9. Explain the CSS box model with a diagram.
10. What are CSS selectors? Name different types.

Long Answer Questions:

1. Explain the evolution of web architecture from static websites to modern web applications.
2. Describe the client–server communication process when a user enters a URL in the browser.
3. Explain how DNS resolution works step by step.
4. Explain the structure of an HTML document.
5. Discuss the importance of semantic HTML in accessibility and SEO.
6. Explain how forms work in HTML, including form validation attributes.
7. Explain flex and grid system in brief.
8. Explain how multimedia elements (audio, video, iframe) are embedded in HTML.
9. Explain how CSS improves separation of content and presentation.
10. Describe the importance of responsive design.
11. Explain the key features of Bootstrap.
12. Discuss how HTML, CSS, and JavaScript work together to build interactive web applications.
